OTM-022: Detecting hydrocarbon leaks

Detecting hydrocarbon leaks

Challenge

	Challenge ID	OTM:022					
1	Title	Detecting hydrocarbon leaks					
2	Theme ID	ON 4.2: Environmental monitoring - Continuous monitoring of changes throughout the lifecycle					
3	Originator of Challenge	Onshore: OTM					
4	Challenge Reviewer / initiator	PEMEX, PetroSA, Shell, Exxon, Chevron					
	General description	Overview of Challenge					
5	What is the nature of the challenge? (What is not adequately addressed at present?)	Locating hydrocarbon leaks occurring from our operations can be challenging, especially if the leak source is under ground or from a long pipeline.					
6	Thematic information requirements	2. Obtain detailed terrain characterisation, 3. Obtain detailed vegetation information, 6. Identify inland water bodies and determine water quality, 7. Determine air quality, 11. Determine lithology, mineralogy and structural properties of the ne					
7	Nature of the challenge - What effect does this challenge have on operations?	• •					
8	What do you currently do to address this challenge?/ How is this challenge conventionally addressed?		Leaks are identified from anomalies in production or transport volumes. Locating them can be very challenging, if there is no visible				
9	What kind of solution do you envisage could address this challenge?	Hydrocarbons seeping from micro fractures typically result in surface anomalies manifested as changes in soil brightness and vegetation health. Certain portions of electro magnetic spectrum in the visible and infrared regions can be used to effectively id					
10	What is your view on the capability of technology to meet this need? – are you currently using EO tech? If			·			
	not, why not?
