

Hatfield-4305: Monitoring air quality related to seasonal fires

Monitoring air quality related to seasonal fires

Challenge

Challenge ID:	HCP-4305	Originator:	Onshore: Hatfield
Title:	Monitoring air quality related to seasonal fires.		
Theme:	ON 4.3: Environmental monitoring - Natural Hazard Risk Analysis		
Consortium Lead:	RPS Group	Interviewed Company:	RPS Group
Geography:	ON.REG.00 - Generic onshore		
Challenge Description			
What is not possible / not adequately addressed at present?			
Crew safety is paramount and in some case need to monitor air quality in operating region if fires are present in the region.			
What effect does this challenge have on operations?			
Air quality is highly dynamic and not a common occurrence, but is an issue in locations in Canada and Indonesia.			
Thematic information requirements:	Air quality and emissions		
What do you currently do to address this challenge?			
How is this challenge conventionally addressed?			
Typically rely on government monitoring (e.g. NOAA) for up to date information and trend analysis.			
What kind of solutions do you envisage could address this challenge?			
Maps of forest fires and particulate concentrations.			
What is your view on the capability of technology to meet this need?			
Are you currently using EO tech? If not, why not?			
None			
Challenge Classification			
Impact on Lifecycle (0=none, 4=high):		Climate / Topography / Urgency:	
Pre-license:	0	Climate class:	Generic climate
Exploration:	3	Topographic class:	Not specific
Development:	3	Seasonal variations:	Dry season focus
Production:	3	Impact area:	Operational cost reduction
Decommissioning:	0	Technology urgency:	2 - Short term (2-5 years)
Challenge Information Requirements			
Update frequency:	Daily		
Data currently used:	Coarse scale continental models		
Spatial resolution:	Regional, Basin		
Thematic accuracy:	10 m		
Required formats:	Not specific		
Timeliness (Vintage):	Daily		
Geographic extents:	Regional		

Existing standards:	None
