

OTM-054: Understanding the near-surface for anticipating seismic signal absorption properties

Understanding the near-surface for anticipating seismic signal absorption properties

Challenge

Challenge ID	OTM:054				
1 Title	Understanding the near-surface for anticipating seismic signal absorption properties				
2 Theme ID	ON 2.3: Surface Geology Mapping - Lithological discrimination				
3 Originator of Challenge	Onshore: OTM				
4 Challenge Reviewer / initiator	PEMEX				
General description		Overview of Challenge			
5 What is the nature of the challenge? (What is not adequately addressed at present?)	Understanding the near surface. This is a key challenge in seismic imaging as it is where most of the seismic signal is lost.				
6 Thematic information requirements	2. Obtain detailed terrain characterisation, 11. Determine lithology, mineralogy and structural properties of the near surface,				
7 Nature of the challenge - What effect does this challenge have on operations?	Any additional understanding that could be obtained would enable better calibration of models and analysis of the acquired data.				
8 What do you currently do to address this challenge?/ How is this challenge conventionally addressed?	Currently near surface models are created; it can be with an uphole survey for example, or pre-existing seismic data. Some specialist companies have Rayleigh wave inversion techniques that provide a proven valuable method of studying the near surface. Com				
9 What kind of solution do you envisage could address this challenge?					
10 What is your view on the capability of technology to meet this need? – are you currently using EO tech? If not, why not?					
Challenge classification					
11 Lifecycle stage	Pre license	Exp.	Dev.	Prod.	Decom.
Score from impact quantification [1]	2	4	0	0	0
12 Climate classification	NOT CLIMATE SPECIFIC				
13 Geographic context/restrictions	Generic onshore (Unspecified)				
14 Topographic classification / Offshore classification	Generic onshore (Unspecified)				
15 Seasonal variations	Any season				
16 Impact Area	Decision enabler, improved quality of seismic output				
17 Technology Urgency (How quickly does the user need the solution)	Immediately (0-2 years)				
Information requirements					
18 Update frequency	Snap shot requirement				
19 Data Currently used					
20 Spatial resolution					
21 Thematic accuracy					
22 Example formats					
23 Timeliness	Reference data - timeliness not important				
24 Geographic Extent	reservoir footprint				
25 Existing standards					

[1] Impact quantification scores: 4 – Critical/ enabling; 3 – Significant/ competitive advantage; 2 – Important but non-essential; 1 – Nice to have; 0 – No impact, need satisfied with existing technology
