OTM-038: Planning secondary surveys

Planning secondary surveys

Challenge

Title Title Theme ID		Challenge ID	OTM:038	OTM:038				
planning surveys and H&S Onshore: OTM Statiol, Eni, Tullow, Petronas General description What is the nature of the challenge? (What is not adequately addressed at present?) Thematic information requirements Thematic information information information information information information information information information inp	1	Title	Planning secondary surveys					
General description General description Overview of Challenge Get information on a potential site before the survey to support the planning and secure the staff. This can include e.g. terrain and vegetation information for chosen the correct equipment. I. Obtain detailed topographic information, 2. Obtain detailed terrain characterisation, 3. Obtain detailed vegetation information, 5. Identify location and condition of transport infrastructure, 6. Identify inland water bodies and determine water qual Nature of the challenge - What effect does this challenge have on operations? What this do solution do you envisage could address this challenge? What this do fosolution do you envisage could address this challenge? What isy our view on the capability of technology to meet this need? - are you currently using EO tech? If not, why not? Challenge classification I. Lifecycle stage Score from impact quantification [1] Lifecycle stage Score from impact quantification [1] Climate elassification NOT CLIMATE SPECIFIC Generic onshore (Unspecified) Impact Area NOT CLIMATE SPECIFIC Generic onshore (Unspecified) Generic onsho	2	Theme ID						
General description What is the nature of the challenge? (What is no adequately addressed at present?) Thematic information requirements Indicate the challenge - What effect does this challenge have on operations? Nature of the challenge - What effect does this challenge have on operations? What do you currently do to address this challenge? How is this challenge conventionally addressed? What did of solution do you envisage could address this challenge? What kind of solution do you envisage could address this challenge? What is your view on the capability of technology to meet this need? - are you currently using EO tech? If not, why not? Challenge classification Lifecyle stage Score from impact quantification [1] Climate classification Climate classification Climate classification Climate classification Technology Urgency (How quickly does the user need the solution) Information and incompliant of the properties of the path of the context and properties. Climate classification Pre license Centinformation on a potential site before the survey to support the planning and secure the staff. This can include e.g. terrain and vegetation information fromation for chosen the correct equipment. Lobatin detailed topographic information, 2. Obtain detailed terrain characterisation, 3. Obtain detailed topographic information, 3. Obtain detailed topographic information, 3. Obtain detailed topographic characterisation, 4 notation and condition of transport infrastructure, 6. Identify location and evaluation and condition of transport infrastructure, 6. Identify location and evaluation and evaluation and evaluation and evaluation and evaluation and evaluation and survey of a remote area before a survey can be challenging and recorded data, but this rare	3	Originator of Challenge	Onshore: OTM					
What is the nature of the challenge? (What is nor adequately addressed at present?) 6 Thematic information requirements 1. Obtain detailed topographic information, 2. Obtain detailed terrain characterisation, 3. Obtain detailed topographic information, 5. Identify location and condition of transport infrastructure, 6. Identify inland water bodies and determine water qual 7 Nature of the challenge - What effect does this challenge have on operations? 8 What do you currently do to address this challenge?/ How is this challenge could addressed? 9 What kind of solution do you envisage could addressed? 10 What is your view on the capability of technology to meet this need? - are you currently using EO tech? If not, why not? Challenge classification 11 Lifecycle stage Score from impact quantification [1] 12 Climate classification 13 Geographic context/restrictions 14 Topographic classification / Offshore classification 15 Seasonal variations 16 Ceneric onshore (Unspecified) Trechnology Urgency (How quickly does the user need the solution) 17 Technology Urgency (How quickly does the user need the solution) 18 Update frequency Opatian for chosen the correct equination and secure the staff. This can include e.g. terrain and overgetation information, for chosen the correct equination and staff. This can include e.g. terrain and overgetation information, for chosen the correct equipment. 1. Obtain detailed topographic information, 5. Identify location and condition of transport infrastructure, 6. Identify inland water bodies and determine water qual therain challed terrain characteristicn, 3. Data detailed terrain characteristicn, 5. Identify location and condition of transport infrastructure, 6. Identify inland water bodies and determine water qual the value and cover area before a survey can be challenging and endeded in formation for an objective or cover only small areas verificant and endeded in formation for an objective or cover only and knowledge, which can be subjective or cover only and the	4	Challenge Reviewer / initiator	Statoil, Eni, Tullow, Petronas					
adequately addressed at present?) and secure the staff. This can include e.g. terrain and vegetation information for chosen the correct equipment. 1. Obtain detailed topographic information, 2. Obtain detailed terrain characterisation, 3. Obtain detailed vegetation information, 5. Identify location and condition of transport infrastructure, 6. Identify include to determine water qual formation for transport infrastructure, 6. Identify include the todal contacts and knowledge, which can be subjective or cover only small areas existing mapping and recorded data, but this rarely is sufficient which is this challenge? What kind of solution do you envisage could address this challenge? What is your view on the capability of technology to meet this need?— are you currently using EO tech? If the medium resolution EO data to derive land cover and land use information in remote and unexplored areas. Resolution depending on covered area and size of analysis objective. 10 What is your view on the capability of technology to meet this need?— are you currently using EO tech? If the medium resolution EO data to derive land cover and land use information in remote and unexplored areas. Resolution depending on covered area and size of analysis objective. 11 Lifecycle stage Score from impact quantification [1] 12 Climate classification 13 Geographic context/restrictions 14 Topographic classification / Offshore classification 15 Seasonal variations 16 Impact Area 17 Technology Urgency (How quickly does the user need the so		General description	Overview of Challenge					
characterisation, 3. Obtain detailed vegetation information, 5. Identify location and condition of transport infrastructure, 6.
