

Mapping long term trends in deforestation in tropical regions

Integration of Satellite EO Technology in Climate Change

•**Users:** Brazilian National Institute Space Research (INPE)

•**Need:** Satellite imagery to estimate Amazon Basin deforestation assessment, rapid revisit times and wide area coverage.

•**Challenge:** Achieving a full coverage in short imaging windows to achieve homogeneity of data for analysis and reducing the impact of cloud cover common to tropical rainforest regions.

•**Initiative:** DMC wide swath images can cover huge areas and they reduce the time of the analysis significantly. It provided reliable annual large area coverage, and multi-temporal coverage of high risk areas.

•**Results:** Frequent forest monitoring with timely action leads to significant decrease of deforestation and prevents forest loss.

•**Service provider:** DMCii (www.dmcii.com)
